🔄 IYKEACE

SUMMARY

A detail-oriented and creative Frontend Engineer with a strong foundation in HTML, CSS, JavaScript, and modern frameworks like React. I build responsive, user-focused interfaces with clean code and strong attention to design and performance. Passionate about continuous learning, I enjoy turning ideas into accessible, functional, and visually appealing web experiences.

WORK EXPERIENCE

Marusoft Technologies Limited

October 2024 - Present

Full-stack development

- Developed and maintained responsive web interfaces using HTML5, CSS3, and JavaScript..
- Optimized page load times and responsiveness through lazy loading, code splitting, and image compression.
- Built interactive single-page applications using React.js, managing state with Redux and Context API.
- Managed complex UI states using Redux Toolkit and React Query.

EDUCATION

Marusoft Technologies Limited

October 2024 - Present

Frontend Web Developer

- Building real-world web applications as part of class projects and personal learning.
- Collaborating with peers to solve coding problems and contribute to group software projects
- Actively learning React.js, Git, and responsive design principles to improve frontend skills.

Federal University of Technology Owerri

November 2025 - Present

Bachelor Degree In Computer Science

- Currently deepening frontend and full-stack development skills through online learning and real-world projects.
- Gaining practical experience with HTML, CSS, JavaScript, React, and Git in preparation for academic and industry-level software engineering challenges.

PROJECTS

My portfolio [🔗](#)

March 2025 - March 2025

My portfolio – I'm actively growing and refining this space to better showcase my skills, projects, and passions. As I continue to learn and take on new challenges, this portfolio will evolve with me. Stay tuned!

Real estate Landing page [🔗](#)

January 2025 - January 2025

Real estate landing page – A clean, visually rich real estate landing page built with HTML and CSS. It includes sections like hero, services, and property listings. The design is partially responsive, and we'll be working on full mobile optimization as the next step.

Student login page [🔗](#)

December 2025 - January 2025

Student login page – A simple and secure login interface for students, built with HTML and CSS. It includes input fields for username and password, styled buttons, and basic form structure. Designed to be clean, user-friendly, and a foundation for further backend integration.

Healthcare project  July 2025 - Present

Healthcare project – A simple single-page React application showcasing dynamic client-side routing using React Router. Deployed on Vercel for live preview.

SKILLS

**HTML, CSS, JAVASCRIPT, REACTS, NEXT.JS-
, Mongo.DB, PostgreSQL, Tailwind, Git, Node.js**
